SUBJECT INDEX

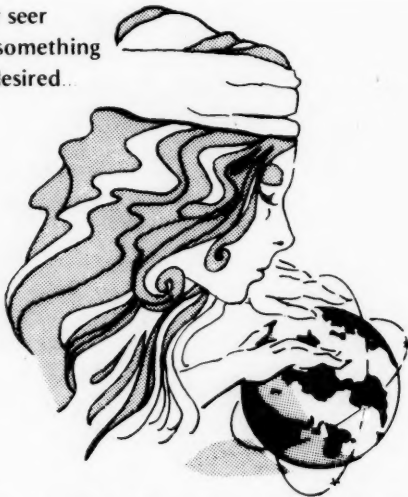

- Algorithm for reducing the moment of inertia of a system interaction matrix, 131
- Aluminium smelter prebaked anode, voltage distributions in an, 339
- Analogies between physical theories, the reason for, 37
- Aortic valve, finite element stress analysis of a human, 218
- Aortic valve leaflets, mathematical modelling of human, 33
- Application of game theory in water management, 16
- Applications of the Runge-Kutta method for the solution of non-linear differential equations, 199
- Applied mathematical modelling in marine science, 3
- Assessment of interfuel substitution by electric utilities, 253
- Arms races and the balance of power: a mathematical model, 83
- Basic needs, economic development and efficiency criteria in the satisfaction of, 290
- Bluff-body flame stabilizers, mathematical modelling of flows in, 276
- Circuit layout problem, hypergraph models for the, 160
- Comparison of some methodologies, input-output analysis and energy intensities: a, 181
- Computation of long-term average SO₂ concentration in the Venetian area, 9
- Computer modelling in long-range planning for extended library services, use of, 401
- Computing, coupled hydrodynamic and structural response, a splitting method for, 333
- Control strategies, modelling a three-phase electric arc furnace: a comparative study of, 355
- Critical flow in hydraulics, fold and cusp catastrophes for, 108
- Curvilinear finite differences, numerical solution of Poisson's equation using, 349
- Design of offshore structures, wave forces on vertical cylinders as a basis for the, 119
- Economic development and efficiency criteria in the satisfaction of basic needs, 290
- Economic growth or decline under the influence of resource depletion, a simple model of, 24
- Electrical energy in the USA, optimal investment, pricing and allocation of, 114
- Environmental quality management programmes in which dischargers are grouped, evaluating, 77
- Evaluating environmental quality management programmes in which dischargers are grouped, 77
- Finite element grid optimization by direct energy

- search, numerical experiments in, 239
- Finite element grids by direct energy search, optimization of, 93
- Finite element simulation of water circulation in the North Sea, 101
- Finite element stress analysis of a human aortic valve, 218
- Fire environments, modelled thermal response of structures in, 319
- Flows in recessed wall flame holder, mathematical modelling of, 125
- Fold and cusp catastrophes for critical flow in hydraulics, 108
- Forecasting the load duration curve, 405
- Fuel uses, simulation model of household, 177
- Game theory in water management, application of, 16
- Hypergraph models for the circuit layout problem, 160
- Identification and analysis of the subsystem structure of models, 245
- Improved stability techniques for the solution of Navier-Stokes equations, 226
- Incompressible fluid flow with an almost-flat free surface, vorticity-streamfunction computation of, 196
- Input-output analysis and energy intensities: a comparison of some methodologies, 181
- Interfuel substitution by electric utilities, an assessment of, 253
- Introduction to the structure and application of the United Nations world model, 261
- Investigation of a mixing length and a two-equation turbulence model utilizing the finite element method, 395
- 'Limits to growth' world model, parameter sensitivity of the, 29
- Marine science, applied mathematical modelling in, 3
- Mathematical modelling of a quasi-linear feedback system, 235
- Mathematical modelling of a stratified cooling pond, 97
- Mathematical modelling of flows in bluff-body flame stabilizers, 276
- Mathematical modelling of flows in recessed wall flame holder, 125
- Mathematical modelling of human aortic valve leaflets, 33
- Mathematical modelling, Re , k and π : a conversation on some aspects of mathematical modelling, 386
- Minimum drag profiles in viscous laminar flow, towards the computation of, 58
- Model for processes combining competition with cooperation, 21
- Modelling a three-phase electric arc furnace: a comparative study of control strategies, 355
- Modelling the evolution of patches of pollutants in the southern North Sea, 170
- Modelled thermal response of structures in fire environments, 319
- Model of city streets, use of a computer file to construct a, 344
- Moment of inertia of a system interaction matrix, an algorithm for reducing the, 131
- Natural environment and optimal population growth, 257
- Navier-Stokes equations, improved stability techniques for the solution of, 226
- Non-linear differential equations, applications of the Runge-Kutta method for the solution of, 199
- Non-linear parabolic equations, stability of two-level difference schemes for a class of, 281
- Numerical experiments in finite element grid optimization by direct energy search, 239
- Numerical models of wind-driven circulation in lakes, 141
- Numerical solution of Poisson's equation using curvilinear finite differences, 349
- Offshore structures, quasistatic response of, using probabilistic methods, 325
- Optimal investment, pricing and allocation of electrical energy in the USA, 114
- Optimization of finite element grids by direct energy search, 93
- Parameter sensitivity of the 'Limits to growth' world model, 29
- Poisson's equation using curvilinear finite differences, numerical solution of, 349
- Pollutants in the southern North Sea, modelling the evolution of patches of, 170
- Population growth, the natural environment and optimal, 257
- Predator-prey model for discrete-time commercial fisheries, 67
- Probabilistic model for a randomly excited flow, 299
- Projection model and a rational policy for the supply and demand of human resources from an educational institution, 269
- Quasi-linear feedback system, mathematical modelling of a, 235
- Quasistatic response of offshore structures using probabilistic methods, 325
- Randomly excited flow, a probabilistic model for a, 299
- Reason for analogies between physical theories, 37
- Re , k and π : a conversation on some aspects of mathematical modelling, 386
- Resource depletion, a simple model of economic growth or decline under the influence of, 24
- Seasonal time series data, separation of random noise models from, 367
- Separation of random noise models from seasonal time series data, 367
- Simple model of economic growth or decline under the influence of resource depletion, 24
- Simulation applications, variable-step integration methods for, 137
- Simulation model of household fuel uses, 177
- Single-point machining, a stability analysis of, with varying spindle speed, 310
- Solution of steady-state, convective transport equation using an upwind finite element scheme, 187
- Splitting method for computing coupled hydrodynamic and structural response, 333
- Stability analysis of single-point machining with varying spindle speed, 310
- Stability of two-level difference schemes for a class of non-linear parabolic equations, 281
- Strategy evaluation in planning of waste management to land—a critical review of the literature, 205
- Stratified cooling pond, mathematical modelling of a, 97

Structure and application of the United Nations world model, an introduction to the, 261
 Structure of models, identification and analysis of the subsystem, 245
 Supply and demand of human resources from an educational institution, a projection model and a rational policy for the, 269
 System interaction matrix, an algorithm for reducing the moment of inertia of a, 131
 Three-phase electric arc furnace: a comparative study of, control strategies, modelling a, 355
 Towards the computation of minimum drag profiles in viscous laminar flow, 58
 Upwind finite element scheme, solution of steady-state, convective transport equation using an, 187
 Use of a computer file to construct a model of city streets, 344

Use of computer modelling in long-range planning for extended library services, 401
 United Nations world model, an introduction to the structure and application of the, 261
 Variable-step integration methods for simulation applications, 137
 Voltage distributions in an aluminium smelter prebaked anode, 339
 Vorticity-streamfunction computation of incompressible fluid flow with an almost-flat free surface, 196
 Water circulation in the North Sea, finite element simulation of, 101
 Wave forces on vertical cylinders as a basis for the design of offshore structures, 119
 Wind-driven circulation in lakes, numerical models of, 141

If your seer
 leaves something
 to be desired...

Write for descriptive information on publications of the Society for Computer Simulation and for your complimentary issue of *SIMULATION* and of our tutorial series, *SIMULATION TODAY*. Give us an idea of your interests, and we'll send you an issue to match!

Write:

THE SOCIETY FOR COMPUTER SIMULATION
 (Simulation Councils, Inc.)
 P.O. Box 2228 -A
 La Jolla, California 92038

We have a better source...

SIMULATION!

... the leading journal devoted to the methods and applications of dynamic modeling and simulation using all types of computers.

SIMULATION, the monthly publication of the Society for Computer Simulation is the only internationally recognized technical journal devoted to all aspects of simulation and modeling. The journal includes techniques for discrete and continuous simulation of dynamic systems, mathematical methods for formulating models and for verifying and validating them, simulation languages, and practical applications of modeling and simulation in a great variety of fields — from the "hard" sciences and engineering to management; from biology, ecology, and medicine to urban planning; from economics and sociology to process control; etc.

SIMULATION TODAY is a tutorial series of papers begun in 1971. They appear in most issues of *SIMULATION* and in separately bound annual volumes. They cover the fundamental "do's and don'ts" of simulation and applications in the numberless new fields in which simulation is proving its power and usefulness.

SCS PROCEEDINGS are semiannual cloth-bound books devoted to particular areas of simulation and modeling. Subjects explored in past issues included: *Mathematical Models of Public Systems*, *Systems and Simulation in the Service of Society*. *The Mathematics of Large Scale Simulation*—and more are soon to come!
